### DATA-DRIVEN GROWTH

# VIZI 360

## Background

Vizi 360 is a tool that enables attorneys to review all levels and aspects of a patient's medical records and summary using a unique timeline system. The user has options to edit data and track all data changes within the timeline system.

## Key Challenges

✓ Tabular reports made it difficult to learn about the timeline

✓ No option to maintain a history of edits to a patients record

✓ Filter-based searches not available

✓ Ability to export a source or edited document not available

## Our Solution

☐ Case history upload option for Attorney firms

☐ Ability to track history in the timeline

☐ Ability to easily review data using iPad and iPhones

☐ Flip option to move through screens

☐ Ability to export documents added

☐ Ability to mark records by category and industry added to the timeline

☐ Timeline report with a function to zoom into and out of data for easy decision-making

## Results

✓ Single window to view the records

✓ Scroll and zoom features added to the timeline

✓ Easy identification of records based on category and industry

✓ Easy upload and download of data

✓ History of all edits to patient records maintained

## Technology Involved

- PHP
- AJAX
- JSON
- MYSQL
- JQuery
- Apache
- Linux
- Bootstrap
